

Assembly Instructions

Akro-Mils Ornament Box Compartments

Included with this container is a series of plain corrugated sheets and perforated, slotted, corrugated sheets. These items are to be used to create individual compartments within your Ornament Box, offering increased protection and versatility. Follow these simple instructions to create the compartments that suit your needs. The 17-Gallon Ornament Box will hold up to 96 compartments, the 12-Gallon Ornament Box will hold up to 72 compartments.

1. Separate corrugated sheets at perforations.
2. The slotted corrugated pieces are of two different lengths. Divide these into two groups according to length.
3. Begin to build the grid using the longer of the slotted pieces. Turn so that the open end of the slots face up.
4. Take a shorter piece and turn so that the open end of the slots face down.
5. Join these pieces at the slots by pushing down until the corrugated meets. At the end of each slot is an additional notch, push firmly, the pieces must fit snugly at this intersection.
6. Continue joining pieces in this fashion until the desired number of compartments is achieved.
7. Place this grid in the container bottom, and cover with flat corrugated sheet. Continue in this fashion until the desired number of storage levels is achieved.
